

Parametrix

Animation made fast and easy!

Motivation

Parametrix was inspired by my use of math and my love for freelance art. I realized just how much time automation, specifically through the use of parametric equations, could save in the animation pipeline, which is often bottlenecked by tedious, repetitive drawings of the same thing. I took it upon myself to make the concepts I had been modeling in Desmos a paradigm of its own, bridging the gap between math and art.

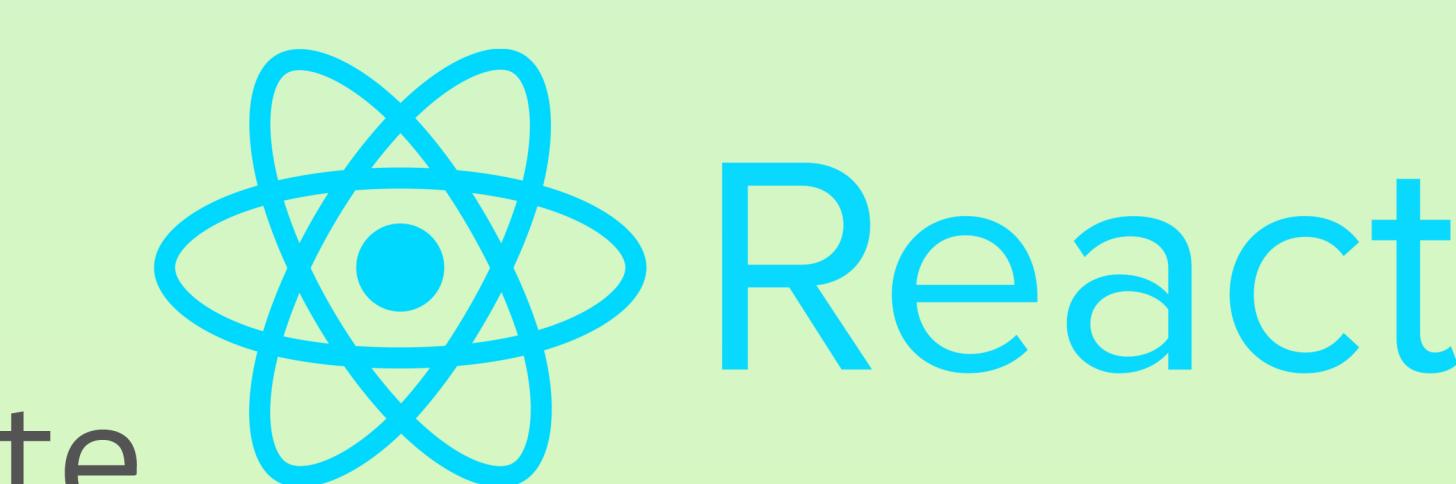

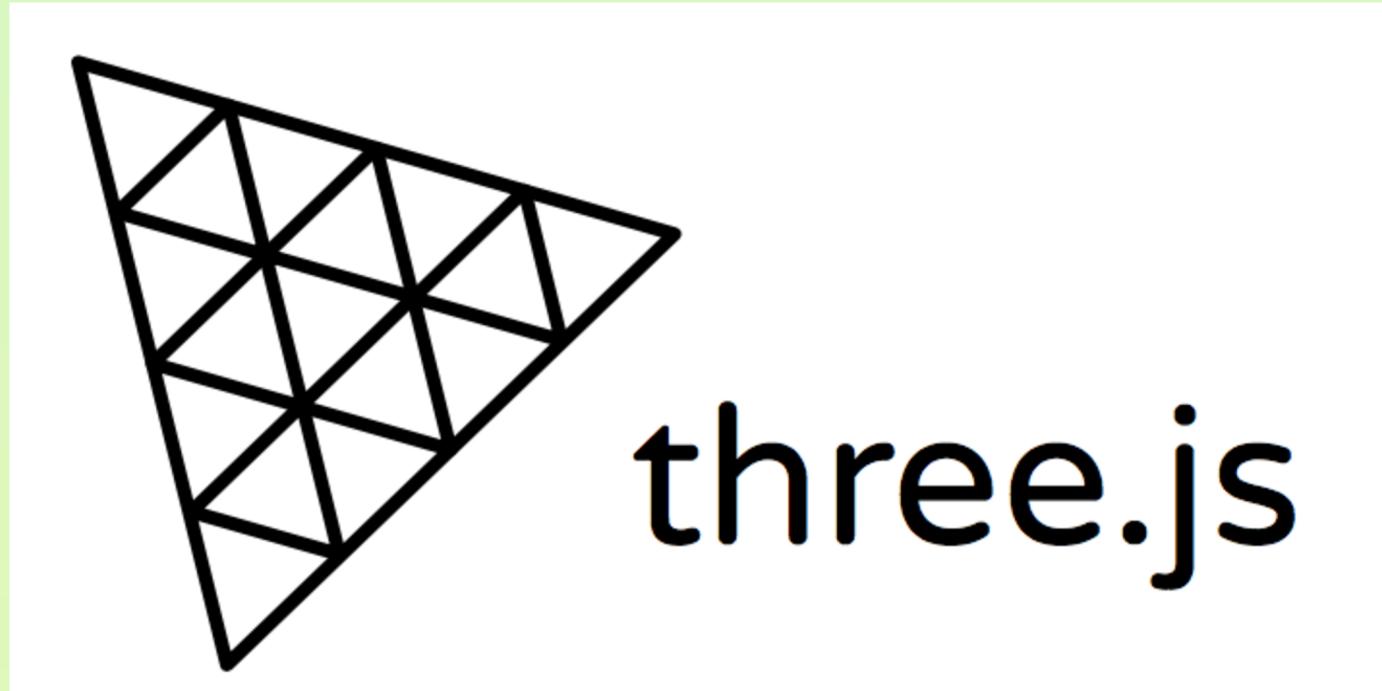

How to use:

1. Open the Parametrix website
2. Add an object
3. Add a function to the object from the right click menu!

For managing website

For creating graphics
